

Steps I took after I created the connection

Once I had provided credentials, and created a connection name, this window is displayed:

New Feature Available

There are new features available on the server to which you are connecting. Select the Assemblies that you want to download and install that support these features.

Assembly: Microsoft.Web.Management.IisClient

Features: WebObjects, Modules, Handler Mappings, Authentication, Authentication - Anonymous, Authentication - Basic, Authorization Rules, IPv4 Address and Domain Restrictions, SSL Settings, Default Document, Directory Browsing, Compression, Error Pages, HTTP Response H

Size: 1,688 KB

Version: 7.5.0.0

Assembly: Microsoft.Web.Management.AspnetClient

Features: Authentication - Forms, ASP.NET Impersonation, .NET Trust Levels, .NET Roles, .NET Users, Pages and Controls, Application Settings, Connection Strings, .NET Globalization, .NET Compilation, Machine Key, ProviderConfiguration, .NET Profile, Session State, SMTP

Size: 504 KB

Version: 7.5.0.0

I ticked the boxes for both assemblies, and clicked on the OK button. I could see this progressing being displayed in grey on the bottom left of the box as follows:

Downloading

Validating assemblies

Then another window pop-up displayed with this message:

IIS Manager - Security Warning

The publisher could not be verified. Are you sure you want to run this software?

Name: Microsoft.Web. Management. IisClient.dll

Publisher: unknown Publisher

This file does not have a valid digital signature that verifies its publisher. You should only run software from publishers you trust.

I then clicked on the Run button, and could see this being displayed in grey on the bottom left of the box as follows:

Validated 'C:\Users\xxx\AppData\Roaming\Microsoft\WebManagement\7.0 (missing rest)

Then another window pop-up displayed with this message:

IIS Manager - Security Warning (window)

The publisher could not be verified. Are you sure you want to run this software?

Name: Microsoft.Web.Management.AspnetClient.dll

Publisher: unknown Publisher

This file does not have a valid digital signature that verifies its publisher. You should only run software from publishers you trust.

I then clicked on the Run button, and all windows disappeared, and the Features View of the connection was displayed with only the URL Rewrite.

~~~~~

I then went to look at the location of where it appeared to be writing the files, and this is what I have found:

```
C:\Users\xxx\AppData\Roaming\Microsoft\WebManagement\7.0.0.0\Modules\  
Microsoft.Web.Deployment.UI.Client_8.0.0.0_31bf3856ad364e35  
    Microsoft.Web.Delegation.dll  
    Microsoft.Web.Deployment.dll  
    Microsoft.Web.Deployment.UI.Client.dll  
    En  
        Microsoft.Web.Delegation.resources.dll  
        Microsoft.Web.Deployment.resources.dll  
    x64  
        axNative.dll  
    x86  
        axNative.dll
